

GRADUATE DEGREE: INFORMATION SYSTEMS MANAGEMENT (MS)

Master of Science (M.S.) in Information Systems Management

The M.S. in Information Systems Management prepares graduates to successfully design, develop, implement, and manage information systems. Built on a strong information technology foundation, the program allows students to develop the knowledge and skills needed to work with and manage emerging technologies in business and professional settings. In addition, the program allows students to specialize in networking, e-commerce, multimedia, training and education, programming, or project management.
